

HERMANN J. WIEMER NURSERY

Keep vines in a moist, cool environment. Do not cut tops or roots.
Soak vines for 24 hours before planting.

PLANTING YOUR VINES

1. Always keep vine moist during the planting process. Do not allow the roots to dry out.
2. Spread roots out to insure that the roots set.
3. Heel in vine deep enough so the union can be covered with soil. With young vines, the union is fragile until it becomes established.
4. Pack soil around plants to collapse any air pockets.
5. Mound soil around top growth until growth is apparent. After growth is apparent, this mound should be removed.
